

Demystifying Basic HTML

Inserting and Linking a Picture

By now, you should be very comfortable with inserting and linking graphics. (You had a lot of practice just a little while ago when you were creating the navigation bar.) For this page, we opted to display the picture below the size 3 heading and along the right side of the page. Furthermore, because the photograph is a picture of Chris, we linked the photograph to the Background page.

To insert a linked picture within your page's body text, follow these steps:

1. Open index.html in a text editor if necessary, click after the `</h3>` tag in the second cell in the second row of the table, press Enter, and press Tab.

tip The `<h3>` tag is near the top of cell 2, row 3

2. Type the following link and image information:

```
<a href="background.html"></a>
```

In this step, you can see some added attributes to the `` tag, which are defined as follows:

- **hspace** enables you to specify extra space (in pixels) between the image and text on the left and right sides of the image.

- **vspace** enables you to specify extra space (in pixels) between the image and text above and below the image.
- **align** indicates to align the picture on the page, and text wraps accordingly. In this example, the picture is aligned to the right side of the page.

3. Save index.html.
